## Experience

**Full-stack engineer,** Rotoplas – Mexico City Aug 2025 - Present

- Modernized legacy backend systems by migrating Java-based web services to NestJS, aligning the codebase with Rotoplas' current tech standards and improving maintainability
- Development in HubSpot platform
- Design and development of a conversational agent (via chat and via phone call) using Conversational Agent GCP tool
- Designed and deployed scalable backend web services with NestJS on Google Cloud Platform (GCP)

**Backend Engineer,** FP Alpha – Remote May 2024 – May 2025

- Developed and maintained back-end web services to handle and support AI-powered document analysis workflows using NestJS and Express, allowing to manage more document processing volume
- Integrated OpenAI SDK via Flask and implemented Redis-based multi-threading, allowing to process more documents and more customer cases types.
- Designed and optimized MongoDB schemas to handle complex and high-volume datasets

**Full-stack developer,** Content-oh! – Mexico City July 2023 – Oct 2023

- Developed e-commerce web microservices using Express and deployed them in AWS Lambda and API Gateway
- Developed React based tools and dashboards for both internal and customer-facing by collaborating with product design teams, allowing users to create and follows their requests and products
- Optimized SQL queries in MySQL database reducing page loading from 3 seconds under 1 second

**Backend developer,** GAC Solutions – Remote Mar 2023 – June 2023

- Developed a secure payment service using NestJS and integrating both Dock and Stripe APIs allowing the user to make secure online payments
- Developed automated Docker image builds increasing the development experience of the team and reducing the time of deployment

**Trainee full-stack developer,** MNemo – Mexico City Mar 2022 – Mar 2023

- Developed web services using Express that allowed users to check and retrieve information related to their assets and the security of them
- Design and developed a web page using Angular where the users could check wether they suffer an attack and the type of the attack
- Managed MongoDB and CosmosDB schemas, optimizing queries for faster data retrieval
- Created Azure DevOps CI/CD pipelines to automate build and deployment processes

## Projects

**Risky measurer** [github.com/BiggieLion/pt2-backend](https://github.com/BiggieLion/pt2-backend)

- Developed backend web services using NestJS that evaluates the credit risk of a credit request with an Artificial Intelligence, built up in a Docker Image and deployed in AWS ECR
- Trained an AI model using scikit-learn and NumPy that evaluates the credit risky of a credit request
- Developed the web page using Angular and deployed it in Vercel

## Skills

**Languages:** JavaScript, TypeScript, python, Java, HTML, CSS

**Frameworks and technologies:** Node.js, Angular, React, NestJS, Flask, FastAPI, scikit-learn, NumPy, Spring, AWS, ECR, S3, EKS, EKR, Cognito, CodePipeline, GCP, Conversational Agents, Apigee, Application Integration, Cloud Run

## Education

UPIITA – Telematics engineering

Jan 2026
