Heber Jair León Ramírez

Backend Engineer — Node.js · TypeScript · PostgreSQL · GCP / AWS
hleonr1300@gmail.com | linkedin.com/in/jairleon | jair.codes | Mexico City (UTC-6)

Experience

Full-Stack Engineer (backend-focused), Grupo Rotoplas – Mexico City Aug 2025 – Present

- Designed and built **Orbita**, the B2B operational CRM replacing HubSpot: NestJS 12 (native ESM) API on **PostgreSQL 18 / TypeORM** (84 endpoints, 49 entities, 52 versioned migrations) with two-level multi-tenancy, RBAC, soft deletes, an append-only field-level audit log and an 11-type service-order state machine; Angular 22 portal and a read-only MCP server
- Delivered Orbita spec-first with product and operations (43 approved specs, 13 ADRs); 5,400+ Vitest tests and 70 e2e suites against real PostgreSQL, coverage gate $\geq$ 80% per workspace
- Built event-driven services (NestJS, TypeORM/Prisma, MySQL, Cloud Run) syncing HubSpot with Bringoz, Commercetools and Fluent OMS via Apigee: HMAC-verified webhooks, idempotent ingestion, transactional outbox, persistent retry queues resumable by phase
- Cut a critical reports endpoint from ∼2 minutes (load-balancer 502s) to seconds by replacing a sequential N+1 with HubSpot batch reads and bounded concurrency; redesigned bulk ZIP exports as a resumable job queue emailing GCS signed URLs
- Hardened API security: scoped API keys, per-key rate limiting (429 + `Retry-After`), HubSpot HMAC v3 checks with stale-timestamp rejection, CSP headers, Secret Manager with a rotation runbook, `pnpm audit` as a merge gate
- Led the migration of four production NestJS apps to NestJS 12 on native ESM, TypeScript 6 and Vitest/oxlint; extracted a shared OpenTelemetry package (Cloud Trace, trace-correlated pino logs, log-based metrics, alerts and dashboards as code) and cut Cloud Run cold start with a lazy exporter
- Architected two Turborepo/pnpm monorepos and their CI/CD on Cloud Build and GitLab (lint, test, audit, SonarCloud, deploy by immutable SHA, Renovate, semantic-release) at 97–100% unit coverage; built a GitLab→Google Chat MR bot with Jira sync, a Gemini LLM merge-request reviewer (Python) and Claude Code agents and hooks adopted by the team

Backend Engineer, FP Alpha – Remote (NY-based) May 2024 – Jun 2025

- Maintained and extended the advisor platform's backend: a ∼500-route Express/MongoDB API (150+ Mongoose schemas; Stripe, Salesforce and Yodlee integrations) and a NestJS document-intelligence microservice
- Developed Python document-extraction services (Flask, GPT-4o, Azure Document Intelligence OCR) behind six rate-limited Bull/Redis job queues with Dockerized workers, covering 20+ financial document types

Customer Programs Analyst, Viva Aerobus – Mexico City Jan 2024 – May 2024

- Technical point of contact for the Viva Cash and Hotels launches; built an internal serverless data API on AWS (Lambda, API Gateway, S3) with CSV ingestion, deduplication and keyed search, deployed via GitHub Actions

Full-Stack Developer, Content-oh! – Mexico City Jul 2023 – Oct 2023

- Developed order-workflow features on a serverless e-commerce platform of 100+ AWS Lambdas (API Gateway, Cognito, S3, SQS/SNS, SES) and cut MySQL page loads from 3 s to under 1 s through query optimization

Backend Developer, GAC Solutions – Remote Mar 2023 – Jun 2023

- Developed a digital-wallet API in NestJS/TypeORM (MySQL) integrating Dock card issuing (OAuth2 client credentials), STP (SPEI) accounts and Pespay cash-in, with JWT auth, migrations and Docker Compose

Full-Stack Developer (trainee program), Mnemo – Mexico City Mar 2022 – Mar 2023

- Developed Express/MongoDB microservices for a threat-intelligence platform (JWT auth, Twilio 2FA) in an 11-service PM2 fleet, plus Angular security-posture dashboards
- Created Azure DevOps CI/CD pipelines shipping Docker images to Azure Container Registry and AKS; wrote Python/pandas scripts remediating production MongoDB data

Skills

Languages: TypeScript, JavaScript (Node.js 20–24, ESM), Python, C#, Java, SQL
Backend & data: NestJS, Express, Flask, PostgreSQL, MySQL, MongoDB, Redis, Firestore, BigQuery, TypeORM, Prisma, Mongoose, Bull, REST/OpenAPI, webhooks, outbox and job-queue patterns
Cloud & DevOps: GCP (Cloud Run, Cloud Build, Pub/Sub, Cloud Tasks, Apigee, Secret Manager, Cloud Trace), AWS (Lambda, API Gateway, S3, SQS/SNS, Cognito, ECR), Azure (DevOps, AKS), Docker, Kubernetes, GitLab CI, GitHub Actions, OpenTelemetry, SonarCloud
Quality & AI: Vitest/Jest, supertest e2e, oxlint, Renovate, semantic-release; OpenAI and Gemini SDKs, MCP servers, Claude Code agentic workflows, scikit-learn; Angular 22, React

Education & Certifications

Instituto Politécnico Nacional (UPIITA) – B.Eng. in Telematics Engineering Jan 2026
English: C2 Proficient (EFSET 75/100) · Spanish: native
