

Heber Jair León Ramírez

Full-Stack Engineer — NestJS · TypeScript · GCP
hleonn1300@gmail.com | linkedin.com/in/jairleon | jair.codes

Experience

- Full-Stack Engineer**, Grupo Rotoplas – Mexico City Aug 2025 – Present
- Built an event-driven platform (NestJS, TypeORM/MySQL, Cloud Run) replicating HubSpot CRM changes into logistics systems through Apigee — transactional outbox, idempotent ingestion, and retry queues with self-service replay
 - Cut a critical reports endpoint from ~2 minutes (load-balancer 502s) to seconds by replacing a sequential N+1 with HubSpot batch reads and bounded concurrency; redesigned bulk ZIP exports as an async flow emailing GCS signed URLs
 - Implemented production-grade API security: HMAC signatures with replay protection, scoped API keys, rate limiting
 - Architected a Turborepo/pnpm monorepo and its CI/CD on GCP Cloud Build (lint, test, audit, deploy by immutable SHA), with per-app semantic-release versioning and QA/prod config via Secret Manager
 - Instrumented OpenTelemetry observability: Cloud Trace propagation, trace-correlated structured logging, and log-based metrics, alerts, and dashboards versioned as code
 - Designed AI-assisted engineering workflows (custom Claude Code agents, security hooks, commit and Jira automation) and Python pipeline tooling — an LLM merge-request reviewer (Gemini API) — sustaining 95% unit-test coverage
 - Built a GitLab-to-Google Chat MR/deploy notification bot with Jira sync; deployed conversational agents (chat and voice) with GCP Conversational Agents; migrated legacy Java web services to NestJS
- Backend Engineer**, FP Alpha – Remote (NY-based) May 2024 – Jun 2025
- Maintained and extended the advisor platform's backend: a ~500-route Express/MongoDB API (150+ Mongoose schemas; Stripe, Salesforce, and Yodlee integrations) and a NestJS document-intelligence microservice
 - Developed Python document-extraction services (Flask, GPT-4o via the OpenAI SDK, Azure Document Intelligence OCR) behind six rate-limited Bull/Redis job queues with Dockerized workers, covering 20+ financial document types
- Customer Programs Analyst**, Viva Aerobus – Mexico City Jan 2024 – May 2024
- Led cross-functional teams delivering the Viva Cash and Hotels product launches as the team's technical point of contact
 - Built an internal serverless data API on AWS (Lambda, API Gateway, S3): CSV ingestion with deduplication and keyed search, deployed via GitHub Actions with automated releases (Conventional Commits)
- Full-Stack Developer**, Content-oh! – Mexico City Jul 2023 – Oct 2023
- Developed order-workflow features across a serverless e-commerce platform of 100+ AWS Lambdas (API Gateway, Cognito, S3, SQS/SNS, SES), plus React catalog tools built with the product design team
 - Optimized SQL queries in MySQL, reducing page load time from 3 seconds to under 1 second
- Backend Developer**, GAC Solutions – Remote Mar 2023 – Jun 2023
- Developed a digital-wallet API in NestJS/TypeORM (MySQL) integrating payment rails — Dock card issuing via an OAuth2 client-credentials interceptor, STP (SPEI) accounts, and Pespays cash-in — with JWT auth and migrations
 - Containerized the API with Docker and docker-compose, improving developer experience and reducing deploy time
- Trainee Full-Stack Developer**, Mnemo – Mexico City Mar 2022 – Mar 2023
- Developed Express/MongoDB microservices for a threat-intelligence platform — JWT auth with Twilio 2FA — within an 11-service PM2 fleet using Azure Blob Storage
 - Built the Angular client dashboards reporting security posture: alerts, attacks, takedowns, and monthly reports
 - Created Azure DevOps CI/CD pipelines shipping Docker images to Azure Container Registry and Kubernetes (AKS); wrote Python/pandas scripts remediating production MongoDB data

Projects

- Credit Risk Assessment Platform** github.com/BiggieLion/pt2-backend
- Built NestJS services assessing loan credit risk with a machine-learning model trained in Python (scikit-learn, NumPy), containerized with Docker and deployed to AWS ECR; Angular frontend deployed on Vercel

Skills

Languages: TypeScript, JavaScript, Python, Java, SQL

Frameworks & databases: Node.js, NestJS, Express, Bull, Mongoose, TypeORM, Flask, Angular, React, MySQL, MongoDB, Redis, Firestore, Cosmos DB

Cloud & DevOps: GCP (Cloud Run, Cloud Build, Apigee, Pub/Sub, Secret Manager, Conversational Agents), AWS (Lambda, API Gateway, S3, SQS/SNS, Cognito, ECR), Azure (DevOps, AKS, Blob Storage, Document Intelligence), Docker, Kubernetes, CI/CD

AI engineering: OpenAI SDK (GPT-4o), Gemini SDK, scikit-learn, NumPy, agentic workflows (Claude Code), prompt-driven automation

Education & Certifications

Instituto Politécnico Nacional (UPIITA) – B.Eng. in Telematics Engineering
English: C2 Proficient (EFSET 75/100) · Spanish: native

Jan 2026
