Experience

Full-stack engineer, Rotoplas – Mexico City Aug 2025 – Present

- Built an event-driven integration platform (NestJS, TypeORM/MySQL, GCP Cloud Run) replicating HubSpot CRM changes into logistics systems through Apigee, using a transactional outbox pattern with retries for at-least-once delivery
- Implemented production-grade API security: HMAC signature verification with replay protection, hashed API keys with scopes, rate limiting, and idempotent event ingestion
- Architected a Turborepo/pnpm monorepo and its CI/CD on GCP Cloud Build (lint, test, audit, build, deploy by immutable SHA), with per-app semantic-release versioning and QA/prod deployments via Secret Manager
- Instrumented observability with OpenTelemetry: Cloud Trace propagation, trace-correlated structured logging, and log-based metrics, alerts, and dashboards versioned as code
- Designed AI-assisted engineering workflows (custom Claude Code agents, security hooks, automated commit and Jira pipelines), sustaining 95% unit-test coverage; built a GitLab-to-Google Chat MR notification bot with Jira sync
- Designed and deployed conversational agents (chat and voice) with GCP Conversational Agents; migrated legacy Java web services to NestJS

Backend Engineer, FP Alpha – Remote May 2024 – May 2025

- Developed and maintained back-end web services supporting AI-powered document analysis workflows using NestJS and Express, increasing document processing throughput
- Integrated the OpenAI SDK via Flask and implemented Redis-backed parallel processing, expanding coverage to additional document volumes and customer case types
- Designed and optimized MongoDB schemas to handle complex, high-volume datasets

Full-stack developer, Content-oh! – Mexico City July 2023 – Oct 2023

- Developed e-commerce microservices with Express, deployed on AWS Lambda and API Gateway
- Built React-based tools and dashboards for internal and customer-facing use in collaboration with product design teams, allowing users to create and track their requests and products
- Optimized SQL queries in MySQL, reducing page load time from 3 seconds to under 1 second

Backend developer, GAC Solutions – Remote Mar 2023 – June 2023

- Developed a payment service in NestJS integrating the Dock and Stripe APIs, enabling secure online payments
- Automated Docker image builds, improving the team's developer experience and reducing deployment time

Trainee full-stack developer, MNemo – Mexico City Mar 2022 – Mar 2023

- Developed Express web services that let users check and retrieve information about their assets and their security posture
- Designed and developed an Angular web page showing users whether they had suffered an attack and the type of attack
- Created Azure DevOps CI/CD pipelines to automate build and deployment processes

Projects

Credit Risk Assessment Platform github.com/BiggieLion/pt2-backend

- Developed NestJS backend services that assess the credit risk of loan applications using a machine-learning model, containerized with Docker and deployed to AWS ECR
- Trained the credit-scoring model with scikit-learn and NumPy
- Built the Angular frontend and deployed it on Vercel

Skills

Languages: TypeScript, JavaScript, Python, Java, SQL, HTML, CSS

Frameworks & databases: Node.js, NestJS, Express, TypeORM, Flask, FastAPI, Angular, React, MySQL, MongoDB, Redis, Firestore, CosmosDB

Cloud & DevOps: GCP (Cloud Run, Cloud Build, Apigee, Pub/Sub, Secret Manager, Conversational Agents), AWS (Lambda, API Gateway, ECR, S3, Cognito), Docker, Turborepo, OpenTelemetry, CI/CD, Azure DevOps

AI engineering: OpenAI SDK, scikit-learn, NumPy, agentic workflows (Claude Code), prompt-driven automation

Education

Instituto Politécnico Nacional (UPIITA) – B.Eng. in Telematics Engineering

Jan 2026
