Heber Jair León Ramírez

Backend & Platform Engineer — Node.js / NestJS · TypeScript · PostgreSQL · GCP / AWS · Terraform
hleonr1300@gmail.com | linkedin.com/in/jairleon | jair.codes | Mexico City (UTC-6)

Experience

Full-Stack Engineer (backend-focused), Grupo Rotoplas – Mexico City Aug 2025 – Present

- Bootstrapped and co-lead (2-engineer team) an **in-house B2B operational CRM** (companies, assets, service orders, field appointments): NestJS 12 (native ESM) API on **PostgreSQL 18 / TypeORM** (93 endpoints, 55 entities, 64 migrations) with two-level multi-tenancy, RBAC, field-level audit log and a service-order state machine; Angular 22 portal and a 23-tool read-only MCP server
- Delivered the CRM spec-first with product and operations (authored 33 of 61 specs and 6 of 15 ADRs); 6,900+ Vitest tests and 88 e2e suites against real PostgreSQL, 80% coverage gate per workspace, p95 $\leq$ 300 ms benchmark on list endpoints
- Lead author (61% of commits, ∼90 Jira tickets) of the integration monorepo: 4 NestJS 12 Cloud Run services and 4 scheduled Jobs syncing HubSpot with Bringoz, Commercetools and Fluent OMS via Apigee (HMAC-verified webhooks, idempotent ingestion, transactional outbox, resumable retry queues); 2,900+ tests at **97–100% line coverage**
- Cut a critical reports endpoint from ∼2 minutes (502s at the load balancer) to seconds by replacing a sequential N+1 with chunked HubSpot batch reads and bounded concurrency; moved bulk ZIP exports to an async resumable job with signed URLs
- Hardened API security: scoped API keys, per-key and per-IP rate limiting (429 + `Retry-After`), HubSpot HMAC v3 with anti-replay, nonce-based CSP and helmet headers, Secret Manager config and rotation runbook, `pnpm audit` merge gate
- Introduced correlation-ID logging and OpenTelemetry/Datadog tracing in Bebbia's 510-endpoint NestJS backend, then extracted a shared OTel/pino package (Cloud Trace, 18 log-based metrics, 7 alerts, dashboard as code); led the migration of four production apps to NestJS 12 native ESM, TypeScript 6, Vitest and oxlint
- Adopted Terraform import-first over live GCP infrastructure (7 modules, 123 imported resources); built Cloud Build and GitLab CI pipelines (lint, test, audit, SonarQube gate, deploy by immutable SHA, Renovate, semantic-release); shipped a GitLab→Google Chat MR notifier with Jira sync, a Gemini LLM merge-request reviewer and Claude Code agents and guard hooks adopted by the team

Backend Engineer, FP Alpha – Remote (NY-based) May 2024 – Jun 2025

- Maintained and extended the advisor platform's Express/MongoDB backend (600+ routes, 22 domain models, 50+ aggregation pipelines; Stripe, Salesforce, Yodlee and Redtail integrations) and a NestJS estate-report microservice
- Built the Flask document-extraction API (19 endpoints; GPT-4o/4.1 structured outputs into 64 Pydantic models, load-balanced Azure OCR, async jobs with Redis progress) behind six rate-limited Bull/Redis queues with Dockerized workers, moving estate extraction from Tesseract/regex to LLMs and extending coverage to 20+ financial document types

Customer Programs Analyst, Viva Aerobus – Mexico City Jan 2024 – May 2024

- Technical point of contact for the Viva Cash and Hotels launches; built an internal serverless data API on AWS (Lambda, API Gateway, S3) with CSV ingestion, deduplication and keyed search, deployed via GitHub Actions

Full-Stack Developer, Content-oh! – Mexico City Jul 2023 – Oct 2023

- Developed order-workflow features on a serverless e-commerce platform of 100+ AWS Lambdas (API Gateway, Cognito, S3, SQS/SNS, SES) and cut MySQL page loads from 3 s to under 1 s through query and index optimization

Backend Developer, GAC Solutions – Remote Mar 2023 – Jun 2023

- Developed a digital-wallet API in NestJS/TypeORM (MySQL) integrating Dock card issuing (OAuth2 client credentials), STP (SPEI) accounts and Pespay cash-in, with JWT auth, migrations and Docker Compose

Full-Stack Developer (trainee program), Mnemo – Mexico City Mar 2022 – Mar 2023

- Developed Express/MongoDB microservices for a threat-intelligence platform (JWT auth, Twilio 2FA) in an 11-service PM2 fleet, plus Angular security-posture dashboards
- Created Azure DevOps CI/CD pipelines shipping Docker images to Azure Container Registry and AKS; wrote Python/pandas scripts remediating production MongoDB data

Skills

Languages: TypeScript, JavaScript (Node.js 20–24, ESM), Python, SQL, C#, Java
Backend & data: NestJS, Express, Flask, PostgreSQL, MySQL, MongoDB, Redis, BigQuery, TypeORM, Prisma, Mongoose, Bull, REST/OpenAPI, webhooks, outbox/idempotency/job-queue patterns, Puppeteer PDF generation
Cloud & DevOps: GCP (Cloud Run, Cloud Build, Scheduler, Pub/Sub, Apigee, Secret Manager, Cloud Trace), Terraform, AWS (Lambda, API Gateway, S3, SQS/SNS, Cognito), Azure (DevOps, AKS, Document Intelligence), Docker, Kubernetes, GitLab CI, GitHub Actions, OpenTelemetry, Datadog, SonarQube
Quality & AI: Vitest/Jest, supertest e2e, oxlint, Renovate, semantic-release; OpenAI and Gemini SDKs, Pydantic structured outputs, MCP servers, Claude Code agents and hooks; Angular 22, Vue 3/Nuxt, React

Education & Certifications

Instituto Politécnico Nacional (UPIITA) – B.Eng. in Telematics Engineering 2018 – 2023
AWS Academy Cloud Foundations · Google Cloud Computing Foundations · English C2 (EFSET 75/100) · Spanish native
